## Emergency call only samsung s8

(Pocket-lint) - Samsung has announced a tighter version of its Super Galaxy S8 smartphone. The company described the Galaxy S8 Active as the heaviest Galaxy to date, adding a variety of changes that make the S8 a more suitable device for those in the construction field, those who enjoy the outdoors or those who generally need a slightly harder device. Check out Samsung Galaxy S8 Active on AT&T Is Samsung Galaxy S8 Active a Better Device For You Via Galaxy S8? Here are the differences and similarities between the Galaxy S8 Active and the standard Galaxy S8 to help you make decisions. S8 Active is larger, Thicker and heavier S8 Active is mil-STD-810G compliant Both have a rear fingerprint sensor, Single lens camera i USB Type-C Samsung Galaxy S8 Active is designed around a metalnog frame or has a jač construction to make MIL-STD-810G compatible with meaning shock, spoils, water-based and dust resistance, but not just water and dust-resistant dust , such as the Galaxy S8. It is made with military-grade materials and has a bumper around the edges that protects it from impact, abrasion, tilt or twist, while the rear is covered with a hard texture for a more secure grip compared to the glass rear found on the standard S8 device. The Galaxy S8 Active measures 151.9 x 74.9 x 9.9mm and weighs 208.1g, while the standard Galaxy S8 measures 148.9 x 68.1 x 8.0mm and weighs 155g, meaning the Active model is bigger, thicker and heavier. A similar design story runs through both devices and it's clear they are cut from a similar cloth, but the standard S8 is slimmer and neater both, while the S8 Is Active is bulkier. Both have almost all the on-screen fronts, USB Type-C, 3.5mm headphone jack and single-lens camera on the back with a fingerprint sensor on the right. Both 5.8-inch screens, Super AMOLED S8 Active has a stretched S8 Active screen with a level screen, the S8 is bent Samsung Galaxy S8 Active and the standard Galaxy S8 both feature a 5.8-inch Super AMOLED display with a width ratio of 18.5:9. The S8 Active has a resistant layer of propagation-resistant protection, in addition to Corning Gorilla Glass 5, and the standard S8 has corning glass 5 protection. Resolutions also differ between the two devices, albeit only slightly. The S8 Active has a standard Quad HD resolution that puts its pixel density at 506ppi, while the S8 has a Quad HD+ resolution of 2960 x 1440 pixels for a pixel density of 570ppi. This means that the S8 will have a sharper, crisper screen in general, although it is unlikely to be too noticeable. It's unclear whether S8 Active offers Mobile HDR Premium as an S8, but both devices always offer a screen on to see some notifications without turning on the main screen. The only other difference between the S8 Active and the S8 in terms of the screen is the S8 Active has a flat screen, and the S8 has a edge-to-edge shape. Same front and rear camera 12MP rear, 8MP front 4K video clip The samsung galaxy s8 active and galaxy s8 have the same camera capabilities. At the back, you'll find a 12-million-dollar Dual Pixel with an aperture f/1.7, an automatic phase detection and optical image stabilization, along with an LED flash. Meanwhile, the front camera has an 8-megapixel sensor with f/1.7 aperturo, automatic oyster and iris scanning options. The rear snapper is capable of 4K video clip, and the front offers 1080p. Both cameras offer fantastic results based on our experience with them on the Galaxy S8, so you would expect the same from the Galaxy S8 Active. The S8 Active has a larger battery Both have the same processor, RAM and storage Samsung Galaxy S8 Active has many of the same hardware as the Galaxy S8, but it changes things when it comes to battery capacity because it offers a 4000mAh cell in a cell 3000mAh in the standard model. Other specifications remain the same though with the Exynos 8895 or Qualcomm Snapdragon 835 under the hood, depending on the region, along with 4GB of RAM and 64GB of storage. Both models offer microSD support to extend storage up to 256GB. Both devices also support fast charging and wireless charging, both of which also provide support for 32-bit sound. As mentioned earlier, there is a USB type-C port on both devices, along with a 3.5mm headphone jack. Both Android Nougat with TouchWiz S8 Active have quick access to certain features of samsung galaxy s8 Active and Galaxy S8 both run on Android Nougat with Samsung's TouchWiz software over the top, which means that both will offer virtually the same user experience. Both devices also support Samsung's Personal Assistant Bixby, although the Hello Bixby home screen is slightly different on the S8 Active compared to the S8. It offers quick access to active lifestyle features including a staircase, barometer, compass and an outdoor adventure lamp. The standard S8 also has these features, although they are not in a specific area, as with the Active model. Samsung Galaxy S8 tips and tricks: The Samsung Galaxy S8 Active expert's guide will be available in Meteor Grey or Titanium Gold and will cost about \$850 for a limited time exclusively for the U.S. at&T network. It will cost about \$850. The UNITED KINGDOM and global prices and availability have not yet been detailed. The Samsung Galaxy S8 costs £689/\$725 and is available in six colours, although not all colors are available in each region. Most of the differences between the Samsung Galaxy S8 Active and the standard Galaxy S8 lie in their models. The S8 Active model has a more tight finish, is distracted and shock proof as well as against water and dust and offers a flat screen over the curved. It's more about toughness than beauty and it should take that a little bit too much thanks to the extra 1000mAh battery capacity. In addition to the battery, the S8 Active and S8 have the same hardware, so their capabilities should be on par, as well as the camera capabilities. The S8 it is for those who need a harder device, or for those who plan to place an irresistible suitcase on the standard S8 model, while the standard S8 is for those who are careful with the smartphone and want an elegant and elegant device. It says Britta O'Boyle. (Pocket-lint) - Freshly shows what samsung galaxy s8 might look like online, in case-form, and look at the phone based on these models examples. Samsung Galaxy S8 and S8 edge: What's the story so far? Pocket Has been given a case, one unnamed protective cover and a Ghostek Atomic 3 waterproof suitcase. Unfortunately, even though they both claim to be behind the same phone, they have several differences. The unnamed protective cover shows the snipping for the square camera module on the back, and the smaller module above it, which goes through the supposed images of the phone itself, is behind the pulse/heart rate sensor. The example also shows three physical buttons on the left side, two for volume and one that could be a dedicated button for Samsung's Personal Assistant Bixby - originally a Viv. At the top of the case is a separate cut for a button that will preferably be powered. The most interesting thing to get away from an unnamed case though is the neckline for a 3.5mm headphone jack next to one for a USB type-C port. Several rumours have already suggested that Samsung might turn the headphone in favor of USB-C audio, so we'll take it with a pinch of salt. The Samsung Galaxy S8 is certified as a headset rider and retains a 2K Ghostek case screen that shows the galaxy s8 mimic inside but has no other cutout for the heart rate sensor. On the page, it displays the same three physical buttons as an unnamed example, so they can at least agree on something. Another thing that the cases agree on is the lack of a physical front button for the home. Samsung appears to be inserting a fingerprint scanner into the screen, with all controls on the screen. There are only two shots of the Ghostek case, and none of them shows the bottom edge, so we're not sure if it also has a neckline for the 3.5mm headphone jack. Given the wealth of rumors that suggest that there will be no one, and that many other manufacturers are going the way of USB Type-C for audio, we expect Samsung to follow suit. SammobileA reader Sammobile has compiled a depiction of what a Samsung Galaxy S8 would look like based on case printouts and matches the leaked photo, which is believed to be the S8, which appeared on Weibo in early January. There's no home button and a screen that takes most of the front of the device with curved edges, such as the Galaxy S7 Edge. The huge leaking images around confirms the Samsung Galaxy S8 design of course, these are all for now just renders, so it all has to be taken with a pinch of salt, but with a few features appearing more often, we're starting to get a good idea of what to expect launch day. It says Max Langridge. Mr. Langridge, i'm sorry.
